Some New Numerical Reconstruction Methods for Inverse Obstacle/Medium Scattering

J. Zou[1]

Abstract: In this presentation we shall review several newly developed numerical reconstruction algorithms for inverse obstacle/medium scattering problems. Both direct and indirect sampling methods are included, using either near-field or far-field data, and their numerical performance will be compared. This work was substantially supported by Hong Kong RGC grants (projects 405110 and 404611).
